# Weekly Coal Production

Production for Week Ended:  
February 14, 1987

# Highlights

U.S. coal production in the week ended February 14, 1987, as estimated by the Energy Information Administration, totaled 17.5 million short tons (bituminous coal and lignite, 17.4 million short tons; Pennsylvania anthracite, .08 million short tons). This was 3.9 percent lower than in the previous week, and was 0.3 percent higher than production in the corresponding week of 1986.

Cumulative U.S. coal production from January 1 through February 14, 1987, was estimated at 108.3 million short tons, 6.8 percent below the 116.2 million short tons produced in the comparable period in 1986.

The methodology used to make weekly estimates of coal production was published in the Weekly Coal Production (DOE/EIA-0218(86/35)), released for publication on September 8, 1986.
